DETAILED ACTION

Allowable Subject Matter

1. Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

Cannon (U.S. Patent No. 6,609,925) discloses a male BNC connector (28) comprising: a male BNC connector shell (39) and forming at one end a mating cylinder (51) for entering a female BNC connector shell (30) having bayonet pins (29); a bayonet latch (36) having spiral grooves (41) in detents for engaging bayonet pins (29) when the mating cylinder (51) enters the female BNC connector shell (30), and having a region of external threads (53); the bayonet latch (36) slidably and un-rotatably affixed to the male BNC connector shell (39) and over the mating cylinder (51). See Figs. 3-6.

Burkhardt et al. (U.S. Patent No. 6,666,701) discloses a BNC connector (10) comprising: a male BNC connector shell (12) and forming at one end a mating cylinder (Fig. 1) for entering a female BNC connector shell (14) having pins (20); a bayonet nut (16), the bayonet latch (16) slidably and rotatably affixed to the male BNC connector shell (12) and over the mating cylinder (Fig. 1). See Figs. 1-6.

Cannon (U.S. Patent No. 6,602,093) discloses a BNC connector (26) comprising: a male BNC connector shell (28) and forming at one end a mating cylinder (51) for entering a female BNC connector shell (27) having a bayonet pin (31); a bayonet latch (36) having spiral grooves (37) in detents (38) for engaging the bayonet pin (31) when

Art Unit: 2833

the mating cylinder (51) enters the female BNC connector shell (27), the bayonet latch (36) slidably and un-rotatably affixed to the male BNC connector shell (28) and over the mating cylinder (51). See Figs. 3-6.

However, the references fail to teach, disclose, or suggest, either alone or in combination, the bayonet latch slidably and rotatably affixed to the male BNC connector shell and over the mating cylinder, and a friction medium disposed in the bore of the draw nut and within a region bounded by the region of external threads of the bayonet latch and the retainer, the friction medium in contact with a cylindrical outer surface of the bayonet latch and with a cylindrical inner surface of the draw nut, the friction medium communicating to the bayonet latch a selected amount of a rotational force in either direction applied to the draw nut and in combination with the rest of the limitations of the base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kennedy et al. (U.S. Patent No. 5,695,365), Seas (U.S. Patent No. 5,015,194), Mattingly et al. (U.S. Patent No. 4,702,537), McGeary (U.S. Patent No.

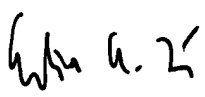

Art Unit: 2833

4,340,269), Riches et al. (U.S. Patent No. 4,550,967) and Drogo (U.S. Patent No. 4,506,943) disclose BNC connectors having bayonet latches, retaining members and nuts.
